The answer: Download either the latest version of the game itself or an installer for the game. Q: Can you prove  $y = P^2 - 2P \sin x + \cos x$  to be a solution to the equation? I have the following differential equation to solve:  $\frac{dy}{dx} = y \left( P + \sin x \right)$  I used Mathematica to check that  $P^2 - 2P \sin x + \cos x$  can be a solution, but is there any way to prove that it is one? A: First expand the expression as a power series in  $x$ : 
$$P^2 - 2P \sin x + \cos x = P^2 - 2P + 1 + 2 \sin x - 2P \sin x + \cos x = P^2 - 2P + 1 + 2 \sin x - 1 = P^2 - P + \sin x - 1$$
 Now rearrange this equation as a polynomial in  $x$ : 
$$P^2 - P + \sin x - 1 = (\sin x - 1)(P - 1) + (\sin x - 1) = (\sin x - 1)P + (\sin x - 1) - 1 = \sin x - 1(P + 1) + (\sin x - 1) - 1 = \sin x(P + 1) - 1$$
 Note that I used the identity  $\sin x - 1 = 2 \sin x \cos x$  in the second step. Now compare the powers of  $\sin x$
